WATER FILTERS

How To Use:

1. Fill the 10-liter bag from the best available water source.
2. Securely screw the lid onto the nozzle and hang the bag from a sturdy point (such as a tree branch or vehicle rack) or set it on a table.
3. Attach the UZ-1 filter to the built-in adapter nozzle at the bottom of the bag.
4. Turn the flow knob to the open position and let gravity deliver safe drinking water.
5. After use, backflush the filter according to Uzima's instructions. Then rinse the bag thoroughly and ensure it is completely dry before folding and storing.

Why Choose the Uzima D-Prep?

Field-Ready & Rugged — This isn't your average water jug. Built from tear-resistant, reinforced materials, the D-Prep+ is made to be dropped, dragged, and deployed in unpredictable conditions. It resists punctures and UV exposure, so you can trust it to hold up when your team is counting on it.

Seriously Simple, Seriously Safe — Forget complicated setups or pumps. This system is powered by gravity, the most reliable source on Earth. Just fill the 10-liter bag, hang it up, and let the WHO-certified UZ-1 filter do the heavy lifting, removing 99.999% of nasty bacteria and protozoa to deliver safe drinking water on demand.

Versatile for Any Mission — The D-Prep+ is a multi-tool for hydration. Use it with the filter for pure drinking water, or use the bag alone for bulk water transport, storage, or as a field handwashing station. Its flexibility reduces logistical headaches and equips your team for multiple scenarios.
